Windows 11 Notepad gets AI-powered text writing capabilities

1. Summary: Microsoft is experimenting with integrating an AI-powered text generation feature into Notepad for Windows 11. This feature, currently available to Windows Insiders, allows users to generate text based on their own prompts, essentially bringing AI writing assistance directly into the basic text editor.

Police takes down 300 servers in ransomware supply-chain crackdown

1. Summary: Law enforcement agencies from seven countries conducted a coordinated operation, dubbed Operation Endgame, resulting in the seizure of approximately 300 servers and 650 domains used by cybercriminals to launch ransomware attacks. This represents a significant blow to the infrastructure supporting ransomware operations.

Claude 4 benchmarks show improvements, but context is still 200K

1. Summary: Anthropic released Claude 4, a new large language model. Benchmark tests show substantial performance improvements over its predecessor, Claude 3. However, a key limitation remains: the context window—the amount of text the model can process at once—is still capped at 200,000 tokens.

DanaBot Botnet Disrupted, 16 Suspects Charged

1. Summary: Law enforcement disrupted the DanaBot botnet, a large-scale network of compromised devices, and charged 16 suspects in connection with its operation.

Chinese Spies Exploit Ivanti Vulnerabilities Against Critical Sectors

1. Summary: A Chinese espionage group is actively exploiting two recently disclosed vulnerabilities in Ivanti Endpoint Manager Plus (EPM) software. These attacks are targeting organizations across multiple critical sectors. The attackers are chaining the vulnerabilities together to achieve their objectives.

Akamai, Microsoft Disagree on Severity of Unpatched 'BadSuccessor' Flaw

1. Summary: Akamai Technologies has publicly disclosed a privilege escalation vulnerability, dubbed "BadSuccessor," affecting Windows Server 2022. Microsoft has chosen not to immediately release a patch, leading to a disagreement between the two companies regarding the severity of the flaw.

Picus Launches Exposure Validation to Safely Deprioritize CVEs

Please provide the article content so I can summarize it for you in the requested format.

Following Data Breach, Multiple Stalkerware Apps Go Offline

1. Summary: Several stalkerware applications went offline following a data breach. The breach was attributed to a single, easily exploitable vulnerability present in at least three of the affected apps, allowing unauthorized access to user data.

Russian Threat Actor TAG-110 Goes Phishing in Tajikistan

1. Summary: The Russian threat actor group TAG-110 is conducting phishing campaigns in Tajikistan. This activity, while Ukraine remains a primary focus of Russian cyberattacks, demonstrates a broader Russian strategy to maintain influence within former Soviet republics by infiltrating their critical infrastructure.

Top 5 Takeaways

1. Proactive Patching is Crucial: The discrepancies between Akamai and Microsoft on the severity of the "BadSuccessor" flaw, coupled with the exploitation of Ivanti vulnerabilities by Chinese spies, highlight the critical need for rapid patching and vulnerability management. Delayed patching leaves organizations vulnerable to sophisticated attacks.
- 2.
3. Supply Chain Attacks Remain a Major Threat: The takedown of 300 ransomware-related servers underscores the persistent danger of supply chain attacks. Focus on securing the entire ecosystem, not just internal systems.

Daily Cloud Security Brief

May 23, 2025

4.

5. 3. AI Presents New Security Challenges: The integration of AI into tools like Notepad introduces new attack vectors and potential vulnerabilities that require careful consideration and proactive security measures.

6.

7. 4. Botnet Threats Persist and are Costly: The disruption of the DanaBot botnet, causing over \$50 million in damages, demonstrates the ongoing threat and significant financial impact of botnets. Strengthen defenses against malware infections and botnet participation.

8.

9. 5. Geopolitical Tensions Drive Cyber Espionage: The activities of TAG-110 in Tajikistan, alongside the Chinese espionage targeting critical sectors, reveal how geopolitical conflicts translate into real-world cyberattacks. Organizations need to be aware of the geopolitical landscape and adjust their security posture accordingly.
